

Smart Power Quality Analyzer

Low-cost real-time monitoring for safer and efficient electrical systems

Problem

Voltage sags, harmonics, and poor power factor can damage equipment, reduce efficiency, and cause unexpected downtime.

Voltage Disturbances

Sags, swells, and unstable supply

Harmonic Distortion

Overheating and equipment malfunction

Poor Power Factor

Higher losses and inefficient energy use

Our Solution

A compact IoT-enabled power quality analyzer that measures, displays, logs, and uploads electrical parameters in real time.

Real-Time Measurement

Voltage, current, frequency, power and power factor

Power Quality Analysis

THD, harmonics, voltage sags and swells

Local Interface

TFT display with touch and physical controls

Cloud Monitoring

Firebase dashboard, device-based access and CSV logs

Why current solutions fail

Commercial power quality analyzers are often expensive, complex, and inaccessible to small industries, laboratories, and educational institutions.

LKR 350,000+

Why it Matters

Lower Cost

Affordable alternative to commercial analyzers

Faster Decisions

Live alerts and continuous monitoring help identify faults early

Better Protection

Reduces equipment damage, downtime, and energy losses

Ideal For :

- Small and medium industries
- Laboratories
- Educational institutions
- Workshops and technical facilities
